IN THE SPECIFICATION

Please amend the paragraph starting at page 7, line 16 as follows:

The interferometer 40 preferably has the delay loop 46, which may be a long section of optical fiber for example 3 feet long. The loop may be coiled depending upon its bending capability, and retained in the coil with a <u>fastening device such as spindle 47</u>, which may for example be made of plastic. Loop 46 also may extend around the perimeter of card 1, so as to gain greater length, but is preferably retained with <u>a fastening device such as clips</u> or in some similar fashion.
